

Mini Project — Data-Driven Boss

Day 06

Lesson 06

Nora XIE

Course 02

Phase 1 — Game Studio

Time: 60–75 min

Mode: Self-study

Today's goals:

- ★ Load boss stats from bosses.json
- ★ Add a second boss without rewriting logic
- ★ Playtest and commit to Git

Course 02 quest map: Day 06 of 18

Hook

Designers change JSON; programmers keep the engine. Today you wear both hats.

Learn

Learn

Put stats in bosses.json:

```
[{"name": "Dragon", "hp": 15, "atk": 4},  
 {"name": "Slime King", "hp": 8, "atk": 2}]
```

Loader picks a boss by name or random. Same fight code, new enemies.

AI rules today

Make: you choose boss names and stats. AI may explain `json.load` only — you edit JSON.

Predict

Run

Investigate

Modify

Make

Demo code

Folder: day06/

```
1 import json  
2 from pathlib import Path  
3  
4 def load_bosses():  
5     with open(Path(__file__).parent / "bosses.json") as f:  
6         return json.load(f)  
7  
8 for boss in load_bosses():  
9     print(boss["name"], "HP", boss["hp"], "ATK", boss["atk"])
```

 Try it

In terminal, `cd course02/day06`, then predict output, then run: `python demos/demo_boss_json.py`

 Assignment

Work in: `day06/assignment/`

A — Predict If you double `hp` in JSON only, does Python code need to change?

B — Playtest Fight each boss twice. Write 2 bullets in `assignment/PLAYTEST.md`.

C — Level up `assignment/bosses.json` + working boss loader in your game. At least 2 bosses.

D — Git One commit message: what you added today.

 Checklist

- ☐ Re-read **Learn**; predict outputs (10 min)
- ☐ Assignments A–D (35–45 min)
- ☐ Run your program 3 times with different inputs
- ☐ Stuck 15 min → C-R-A-V (`../shared/prompts.md`)

Reflection

1. Easiest part today?
2. One line you can teach a friend.

Tomorrow: Phase 2 begins: read your fight log with Python.
