

Hello, Python!

Day 01

Lesson 01

Nora XIE

Vibe Coding Bootcamp

Phase 1 — I can make the computer do things

Time: 60–75 min

Mode: Self-study

Today's goals:

- ★ Run a Python file in Cursor
- ★ Use `print()` to show messages
- ★ Follow the vibe-coding contract from Day 0

Quest map: Day 01 of 22

Hook — why today matters

You type instructions. The computer obeys.

Programs are like quest instructions in a game: exact steps the computer follows. Today you run real Python and see instant results.

Big idea

Learn

Python runs your file line by line. `print()` sends text to the screen. A **bug** is a wrong instruction—not a sign you failed.

Vocabulary: *program, run, terminal, bug.*

AI rules today

Predict & Run: AI off. **Investigate:** you may ask “what does `print` do?” one question at a time. Never ask for a full project today.

Predict → **Run** → **Investigate** → **Modify** → **Make**

Demo code

Folder: day01/

```
1 print("Hello, Nora!")
2 print("I am learning vibe coding.")
3 print("Day 1 quest: complete!")
```

Guided practice

Try it

Open `demos/demo_hello.py`. Write predictions for all three lines. Run: `python demos/demo_hello.py`.

Try it

Change line 2 to include your favorite game. Predict, then run.

Assignments

Assignment

Work in: `day01/assignment/`

A — Predict then Run (AI off) — write predictions, then run to check:

1. `print(2 + 3)` → prediction: _____
2. `print("HP:", 100)` → _____
3. `print("Quest", "complete")` → _____

B — Debug Fix `assignment/buggy_hello.py` so it runs.

C — Level up Create `assignment/my_hello.py`: your name, grade, one fun fact (4+ lines).

D — Explain In 3–4 sentences: What is a bug? When is AI allowed today?

Self-study checklist

- ☐ Re-read **Learn**; predict outputs (10 min)
- ☐ Assignments A–D (35–45 min)
- ☐ Run your program 3 times with different inputs
- ☐ 3-bullet “what I tried” note
- ☐ Stuck 15 min → C-R-A-V (`../shared/prompts.md`)

Reflection

1. Easiest vs hardest today?
2. One line you can teach a friend.

Tomorrow: Variables and a game-style status screen.
