

Input & Numbers

Day 03

Lesson 03

Nora XIE

Vibe Coding Bootcamp

Phase 1

Time: 60–75 min

Mode: Self-study

Today's goals:

- ★ Use `input()` for interaction
- ★ Convert text to numbers
- ★ Build Salute math or a calculator

Quest map: Day 03 of 22

Hook — why today matters

Games ask questions. `input()` lets your program listen.

Big idea

Learn

`input()` returns a string. Use `int()` or `float()` for math. Salute: two secret numbers, friend asks sum.

AI rules today

Predict/Run: AI off. **Investigate:** Socratic hints only. **Make:** you review every line.

Predict — Run — Investigate — Modify —> Make

Demo code

Folder: day03/

```
1 a = int(input("Secret A: "))
2 b = int(input("Secret B: "))
3 print("Psst... sum is", a + b)
```

Guided practice

Try it

Run Salute with a family member as the guesser.

Assignments

Assignment

Work in: day03/assignment/

- A — Predict `int("5")+2` `int("5")+"2"` (error?)
- B — Debug `assignment/buggy_calc.py`
- C — Level up `assignment/salute.py` OR `calculator.py` with `+` and `-`.
- D — Explain Why does `input()` often need `int()`?

Self-study checklist

- ☐ Re-read **Learn**; predict outputs (10 min)
- ☐ Assignments A–D (35–45 min)
- ☐ Run your program 3 times with different inputs
- ☐ 3-bullet “what I tried” note
- ☐ Stuck 15 min → C-R-A-V (`../shared/prompts.md`)

Reflection

1. Easiest vs hardest today?
2. One line you can teach a friend.

Tomorrow: `if/else` for choices and game rules.
