

Errors & try/except

Day 13

Lesson 12

Nora XIE

Vibe Coding Bootcamp

Phase 3

Time: 60–75 min

Mode: Self-study

Today's goals:

- ★ Read tracebacks
- ★ Handle bad input with try/except
- ★ Use debug protocol card

Quest map: Day 13 of 22

Hook — why today matters

Today you level up your builder skills.

Big idea

Learn

Last line of traceback: error type and line number. `try/except ValueError` for bad `int(input())`.

AI rules today

Predict/Run: AI off. **Investigate:** Socratic hints only. **Make:** you review every line.

Predict → Run → Investigate → Modify → Make

Demo code

Folder: day13/

```
1 while True:
2     try:
3         n = int(input("Age: "))
4         break
5     except ValueError:
6         print("Please type a number.")
7 print("Thanks,", n)
```

Guided practice

Try it

In terminal, `cd day13`, then predict output, then run: `python demos/demo_try.py`

Assignments

Assignment

Work in: `day13/assignment/`

- A — **Predict** What error for `int("cat")`?
- B — **Debug** `assignment/buggy_input.py`
- C — **Level up** Harden your guess game input.
- D — **Draw** Circle file, line, and error type on a sample traceback (in PDF space).

Self-study checklist

- ☐ Re-read **Learn**; predict outputs (10 min)
- ☐ Assignments A–D (35–45 min)
- ☐ Run your program 3 times with different inputs
- ☐ 3-bullet “what I tried” note
- ☐ Stuck 15 min → C-R-A-V (`../shared/prompts.md`)

Reflection

1. Easiest vs hardest today?
2. One line you can teach a friend.

Tomorrow: Saving high scores to files.
