

Read the Log — Summarize fights.csv

Day 07

Lesson 07

Nora XIE

Course 02

Phase 2 — Data Lab

Time: 60–75 min

Mode: Self-study

Today's goals:

- ★ Read CSV rows with the csv module
- ★ Count fights and list unique commands
- ★ Print a short text summary

Course 02 quest map: Day 07 of 18

Hook

You built the data. Now be the detective — what happened in all those fights?

Learn

Learn

```
import csv
with open("fights.csv") as f:
    rows = list(csv.DictReader(f))
print("Fights logged:", len(rows))
Loop rows; count how many times command == "fight". No pandas required yet.
```

AI rules today

Predict/Run: AI off. **Investigate:** Socratic hints only. **Make:** you review every line.

Predict — Run — Investigate — Modify —> Make

Demo code

Folder: day07/

```
1 import csv
2 from pathlib import Path
3
4 path = Path(__file__).parent / "sample_fights.csv"
5 with open(path) as f:
6     rows = list(csv.DictReader(f))
7
8 print("Total fights:", len(rows))
9 commands = [r["command"] for r in rows]
10 print("Commands:", set(commands))
```

 Try it

In terminal, `cd course02/day07`, then predict output, then run: `python demos/demo_read_csv.py`

 Assignment

Work in: `day07/assignment/`

A — Predict How many data rows if CSV has 1 header + 5 fights?

B — Practice Run demo on `demos/sample_fights.csv`. Then run on YOUR log from Day 4.

C — Level up `assignment/summarize.py` prints: total rows, commands used, lowest player HP seen.

D — Explain What question about your game could this summary answer?

 Checklist

- ☐ Re-read **Learn**; predict outputs (10 min)
- ☐ Assignments A–D (35–45 min)
- ☐ Run your program 3 times with different inputs
- ☐ Stuck 15 min → C-R-A-V (`../shared/prompts.md`)

Reflection

1. Easiest part today?
2. One line you can teach a friend.

Tomorrow: Clean messy data — typos, blanks, duplicates.
